

***The impact of our school on the identity of our city***

Dear fellow students,

our school participates in an international education project called PULCHRA which aims to bring real life projects as related to cities as urban ecosystems in the classroom. Our school's PULCHRA Science Team consist of 15 students and 4 teachers and the theme of our project is related with the impact of our school to our city. We will try to explore the ideal city which should have a balance between growth, quality of life, climate and human values. Aesthetic upgrading should not be the direct goal. The human factor as an individual and as a society as a whole must be emphasized first.

**12 unique side-projects will unite to create the main one**

You can follow the project in its dedicated page at the PULCHRA platform: [LINK](#)  
We would be very happy if you decide to join our team!
