# App: Cloud types

With this app, you can identify different cloud types. By observing clouds you will learn much about the actual weather situation, the state of the atmosphere and you may even make weather predictions. If you monitor clouds over a period of hours or days, you will see regularities in the atmospheric processes (e.g. warm fronts, cold fronts, thunderstorm, or fog formation).

Whether used for education, science or just for fun, monitoring clouds and their change is scientifically rather important and also very interesting. You will be surprised how many thrilling things you can learn about the atmosphere by observing clouds. Have fun exploring.

This app is available at https://enketo.ona.io/x/#pULJ
